	Investment in the units of Liquid/ Money Market/ Debt Mutual Fund Scheme(s) shall not exceed 5% of the net asset value of the mutual fund.															
Investment Strategy	<p>The Scheme will decide on allocation of funds into equity assets based on equity market Price Earning Ratio (PE Ratio) levels. The PE Ratio has traditionally been used as a tool to assess whether the equity markets are cheap or expensively priced. When the markets become expensive in terms of 'Price to Earnings' Ratio; the Scheme will reduce its allocation to equities and move assets into debt and/or money market instruments and vice versa. Such a strategy is expected to optimise the risk-return proposition for the long term investor.</p> <p>Under normal circumstances; the scheme's asset allocation will follow the table below based on Nifty 50 Trailing PE Ratio Level –</p> <table border="1" data-bbox="203 730 751 1308"> <thead> <tr> <th data-bbox="203 730 521 848">Weighted Avg PE (Standalone) of Nifty 50 Index</th> <th data-bbox="521 730 751 848">Net Equity Component (%)</th> </tr> </thead> <tbody> <tr> <td data-bbox="203 848 521 905">Less than or equal to 18</td> <td data-bbox="521 848 751 905">80-100</td> </tr> <tr> <td data-bbox="203 905 521 993">Above 18 – Less than or equal to 20</td> <td data-bbox="521 905 751 993">60-80</td> </tr> <tr> <td data-bbox="203 993 521 1081">Above 20 – Less than or equal to 22</td> <td data-bbox="521 993 751 1081">40-60</td> </tr> <tr> <td data-bbox="203 1081 521 1169">Above 22 – Less than or equal to 24</td> <td data-bbox="521 1081 751 1169">30-50</td> </tr> <tr> <td data-bbox="203 1169 521 1257">Above 24 – Less than or equal to 26</td> <td data-bbox="521 1169 751 1257">20-40</td> </tr> <tr> <td data-bbox="203 1257 521 1308">Above 26</td> <td data-bbox="521 1257 751 1308">15-25</td> </tr> </tbody> </table> <p>For this purpose the month-end Trailing PE Ratio of Nifty 50 Index (NSE Nifty) will be considered.</p> <p>Such a PE Ratio will be the month-end weighted average PE Ratio of the constituent stocks making up the Nifty 50 Index. The Price considered will be the closing market price on the NSE as at the month end. The undiluted earnings per share will reflect the trailing earnings of the most recent four quarters of each of the companies, for which information is available.</p> <p>Thus every month end we would observe the above mentioned PE ratio and the resultant PE band. The investment strategy outlines different PE bands and the asset allocation applicable to each band. If there is a change in the PE band as observed on the latest month-end as compared to last month-end (due to Nifty's PE moving out of one band to another) then it will require rebalancing of portfolio to bring the equity component in</p>	Weighted Avg PE (Standalone) of Nifty 50 Index	Net Equity Component (%)	Less than or equal to 18	80-100	Above 18 – Less than or equal to 20	60-80	Above 20 – Less than or equal to 22	40-60	Above 22 – Less than or equal to 24	30-50	Above 24 – Less than or equal to 26	20-40	Above 26	15-25	<p>The Scheme will endeavor to invest predominantly in arbitrage opportunities between spot and futures prices of exchange traded equities. In absence of profitable arbitrage opportunities available in the market, the scheme may predominantly invest in short-term debt and money market securities. The fund manager will evaluate the difference between the price of a stock in the futures market and in the spot market. If the price of a stock in the futures market is higher than in the spot market, after adjusting for costs and taxes the scheme shall buy the stock in the spot market and sell the same stock in equal quantity in the futures market, simultaneously. For example, on December 4, 2014, the scheme buys a share of XYZ Company on spot @ Rs. 1000 and at the same time sells XYZ Company futures for December 2014 expiry @ Rs. 1020. The Scheme thus enters into a fully hedged transaction by selling the equity position in the futures market for expiry on say December 25, 2014. If the scheme holds this position till expiry of the futures, the scheme earns profit of Rs. 20 on the date of expiry before accounting for trading costs and taxes.</p> <p>In case the scheme has to unwind the transaction prior to the expiry date on account of redemption pressures or any other reason, the returns would be a function of the spread at which the transaction is unwound. For example, if spot is sold at Rs. 980 and the futures are bought at Rs. 1010 then there would be negative returns on the trade. If the spot is sold at Rs. 1020 and the futures are bought at Rs. 1015 then there would be positive returns from the trade. On the date of expiry, if the price differential between the spot and futures position of the subsequent month maturity still remains attractive, the scheme may rollover the futures position and hold onto the position in the spot market. In case such an opportunity is not available, the scheme would liquidate the spot position and settle the futures position simultaneously. Rolling over of the futures transaction means unwinding the short position in the futures of the current month and simultaneously shorting futures of the subsequent month maturity while holding onto the spot position. There could also be occasions when both the spot and the future position is unwound before the expiry of the current-month future to increase the base return or to meet redemption. Return enhancement through the use of arbitrage opportunity would depend primarily on the availability of such opportunities. The Scheme will strive to build similar market neutral positions that offer an arbitrage potential for e.g. buying the basket of index constituents in the cash segment and selling the index futures. The Scheme would also look to avail of opportunities between one futures contract and another. For example on 16 December 2014, the scheme buys 1000 futures contracts of ABC Ltd. For December expiry at Rs.3000 each and sells an equivalent 1000 futures contract of ABC Ltd. for January expiry at Rs.3030. Thereby the scheme enters into a fully hedged transaction. Closer to the expiry date of the December contract, the scheme has two options. 1) Unwind the transaction by selling the 1000 December contracts and buying 1000 January contracts of ABC. The returns are a function of the spread between the sale price of the January contract and the buy price of the December contract. If this</p>

The returns would be a function of the spread between settlement price of the December contract and the price at which January contracts are squared-off. If this spread is lower than Rs. 30 then the returns are positive and if it is higher than Rs. 30 the returns are negative. The Scheme can also initiate the transaction in the opposite direction i.e. by selling the December futures and buying the January futures, if it sees a profit potential. Under all circumstances the scheme would keep its net exposures neutral to the underlying direction of the market by maintaining completely hedged positions. In addition to stock specific futures, the scheme can also take offsetting positions in index futures of different calendar month.</p> <p>The debt and money market instruments include any margin money that has to be maintained for the derivative position. The margin money could also be maintained partly as Fixed deposits with Scheduled commercial banks. The Scheme would invest in a range of fixed income and money market instruments including units of Debt/Liquid/Money Market Mutual Fund Schemes. Further the Scheme may also invest in financial derivatives such as options and futures & Interest Rate Swap (IRS) that are permitted or may become permissible under SEBI/RBI Regulations. The proportion of assets to be so invested would be decided by the AMC at the appropriate time, and would be done in accordance with the relevant guidelines to be issued by SEBI/RBI and other authorities.</p>

The scheme is positioned to generate capital appreciation and income by investing in arbitrage opportunities in the cash and derivative segments of equity markets and in debt and money market securities.						
Scheme Name	Principal Equity Savings Fund							
Investment Objective	<p>The investment objective of the Scheme is to provide capital appreciation and income distribution to the investors by using equity and equity related instruments, arbitrage opportunities, and investments in debt and money market instruments.</p> <p>However, there can be no assurance that the investment objective of the Scheme will be realized or that income will be generated and the scheme does not assure or guarantee any returns</p>

** Equity exposure would be completely hedged with corresponding equity derivatives.; the exposure to derivatives shown in the above asset allocation tables is exposure taken against the underlying equity investments and should not be considered for calculating the total asset allocation and / or investment restrictions on the issuer. The margin money requirement for the purposes of derivative exposure may be held in the form of Term Deposits.

The Scheme may invest in Treasury Bills, Repos, Reverse Repos, Tri-party repo (“TREPS”) cash and cash equivalents and units of Debt/Liquid/ Money Market Mutual Fund Schemes.

When adequate arbitrage opportunities are not available in the Derivative and Equity markets, the anticipated alternate asset allocation on defensive considerations would be in accordance with the allocation given below. However, in case no arbitrage opportunity is available, then 100% of the remaining investible corpus (excluding margin for derivatives and to the extent not deployed in arbitrage opportunities in the asset allocation pattern mentioned above) will be deployed in short term debt and money market instruments with tenure not exceeding 91 days (including investments in securitized debt).

Subject to the SEBI Regulations, the Mutual Fund may deploy upto 20% of its total net assets of the Scheme in Stock Lending.

	<p>Further, Unit holders are requested to note that post said changes, the Scheme will be treated as equity oriented scheme as per the extant Income-tax laws. However, at the time of changes in the investment pattern during defensive considerations as stated above, the fund manager may choose to have a lower equity exposure. Accordingly, the Scheme may not be able to meet the criteria for equity oriented scheme as specified under the extant Income-tax laws. Consequently, the Unit holders may not be able to avail tax advantage available to an equity oriented fund in that particular financial year. During the defensive circumstances the Tax benefit available for equity oriented scheme will not be applicable and shall be communicated to unit holders vide letters, addendum published in the newspapers as per regulations.</p>
Investment Strategy	<p>The investment strategy is aimed at generating income by investing in arbitrage opportunities in the cash and derivatives segments of the equity markets and in debt securities and at the same time attempting to enhance returns through long exposure in equity and equity related instruments.
